

SciMetrika Knows You and We Know Population Health

Like you, SciMetrika envisions a healthy world. Crafting sustainable solutions as population health consultants since 2001, we have grown to know and understand your needs and challenges, systems and data, and stakeholders and partners. We can advance your mission-critical goals by applying our unique model, which leverages our successful experience across a range of topical areas and projects of varying complexity.

Why Choose SciMetrika

- We offer a range of population health–lifecycle services from identification of population health problems, to solution or program development, implementation, evaluation and continuous monitoring.
- We want to make a difference. We take a health-equity approach, aiming to reduce health disparities and promote optimal health for all.
- We combine our passion for population health with project management tools and processes that maximize the value we provide on each project.
- We attract and engage a multi-disciplinary, highly diverse team of talented population health professionals who balance innovation with practicality.
- We are a trusted business partner. Our services are based on scientific rigor and best practice. Our clients have recognized our contributions and have provided consistently high performance ratings.
- We develop cost-sensitive and cost-realistic solutions to bridge the gap between scientific theory and real-world practice.
- Our approaches are tested and proven on 200+ stand-alone contracts and task orders exceeding a total of \$100M in value since 2006.
- Our model is adaptable and has been effectively applied across many different population health topics, such as cancer prevention and control, nutrition and physical activity, heart disease, birth defects and developmental disabilities, immunization and respiratory diseases, environmental health, injury prevention and control, HIV/AIDS, community health, and global health.

What This Means for You

In the harsh reality of tighter budgets, application of the SciMetrika model will allow your available funding to go further in your mission to solve complex, urgent and important population health challenges facing us now. Together, we will be one step closer to creating a healthy world.

- Primary Data Collections (Mixed Methods)
- Data Management
- Statistical Analysis

Sustainable Programs and Initiatives

- Implementation
- Technical Assistance
- Training
- Evaluation

Information Management

Knowledge Repositories • Analytic Tools • Websites • Research Support Tools • Online Training Tools

Data Collection and Analysis

Our previous experience includes performing over 40 formal literature reviews and information scans, as well as conducting primary and secondary data analysis using large, complex legacy surveys and surveillance systems. We design and conduct surveys with multiple modes of data collection, key informant interviews and site visits. We integrate qualitative and quantitative data to improve understanding of a population health issue or question of interest. As population health experts, our analysis informs study design and our analytical reports go beyond simply addressing statistical significance. They also provide relevant recommendations to stakeholders.

“The contracting personnel provided excellent guidance and leadership throughout the complete project. The vendor produced excellent products related to the primary goals of the project within the timelines of the contract.” — Client

Information Management

Our information technology and data management staff advance our services by developing and supporting knowledge repositories and web portals to exchange information; building websites, analytic and scientific tools to implement new algorithms; and online training.

“Very good experience in using SciMetrika. I would recommend this company to any government Agency. Significantly enhanced [our] ability to manage one of the largest Cooperative Agreements at the [Agency].” — Client

Sustainable Programs and Initiatives

SciMetrika excels at collaborating with clients and stakeholders to develop culturally competent and contextually specific health solutions. We apply evidence-based frameworks to conduct process, outcome and impact evaluations. We dispense intervention knowledge to support implementation and identify effective means of dissemination. We develop curricula and provide training to small and large groups, both in person and at distance, using remote technology tools. We also provide technical assistance to build stakeholder capacity to implement population health programs.

“SciMetrika has consistently provided high quality efforts across all aspects of their work, including monthly communication via conference calls, webinars, presentations, trainings and emails, written products (e.g. annual report, call summaries), website, technical assistance and training. They demonstrated and applied their knowledge and exceptional expertise to the contract, and brought high-level, appropriate subject matter experts as needed to meet the needs of the initiative supported by this contract.” — Client
